LinkedIn | GitHub
Open to relocate

Summary

Python backend engineer (B.Tech CS, 2025) who builds FastAPI and PostgreSQL services and LLM/RAG applications. Built and deployed StockSense, a market-data and prediction platform with tests and CI, Enterprise AI Support Agent (LangGraph + RAG with pgvector), and Aegis, a LangGraph incident-response prototype; former Kyndryl software engineering intern (Python test automation). Open to relocation.

Skills

- **Languages:** Python, Java, SQL, JavaScript, C, C++
- **Backend:** FastAPI, REST APIs, JWT Authentication, ARQ Workers, React
- **Data:** PostgreSQL, pgvector, Redis, Airflow, Pandas, scikit-learn
- **GenAI:** LangGraph, RAG, LLM APIs, AI Agent Workflows
- **Quality & Ops:** Pytest, GitHub Actions, CI/CD, CodeQL, Git, AWS Certified Cloud Practitioner

Experience

StockSense AI — Founder & Backend Engineer, Remote Dec 2025 — Aug 2026
Live demo | GitHub
Python, FastAPI, PostgreSQL, Redis, React, CI/CD

- Built and deployed, with a small team of friends, a live prediction platform (FastAPI, React, PostgreSQL) that stores every next-day close prediction for NSE and US stocks and scores it against the actual close, reported beside last-close and always-up baselines.
- Implemented JWT-authenticated, user-scoped REST APIs with Redis caching and rate limiting, ARQ background workers, and Alembic-migrated PostgreSQL, keeping provider API keys server-side.
- Integrated Twelve Data (US) and Yahoo Finance (NSE) with validation, normalization and rate-aware requests; added an expanding-window walk-forward backtest (long/flat vs buy-and-hold, max drawdown) that uses only information available before each period.
- Wrote a pytest suite covering API, evaluation and data-isolation paths, run in GitHub Actions with CodeQL on every change; deployed on Render.

Kyndryl — Software Engineer Intern, Remote Jun 2024 — Dec 2024
Python automation, Pytest, SQL, debugging, release validation

- Automated manual regression test cases in Python with Pytest.
- Investigated and reproduced defects using application logs and SQL, added regression coverage, and validated fixes with engineering and QA teams.

Projects

Enterprise AI Support Agent — RAG & LangGraph Agent Enterprise AI Agent GitHub
Python, FastAPI, LangGraph, RAG, PostgreSQL/pgvector, Redis, React

- Built a FastAPI support agent whose LangGraph workflow runs bounded tool calls and answers from RAG: document chunking, OpenAI embeddings stored in pgvector, hybrid vector and keyword retrieval, and reranking.
- Added JWT authentication with role checks, rate limiting and a prompt-injection guard; added an evaluation module scoring faithfulness, answer relevance and context recall and precision.
- Wrote Pytest tests for the API and agent components.

Aegis — AI Production Reliability & Incident Response Platform Aegis GitHub
Prototype; evaluation uses synthetic demo data. Python, FastAPI, React, PostgreSQL, Redis, LangGraph

- Built a FastAPI + React incident-response platform where a LangGraph agent investigates incidents through a bounded workflow of tool calls over metrics, logs, traces and deployments.
- Gated impactful remediation behind explicit human approval, with defined incident state transitions and audit logging; secured with JWT authentication and role-based access control.
- Added a failure simulator and Pytest checks of state transitions, approval gating and remediation authorization on synthetic deterministic fixtures.

Education

Graphic Era Hill University, Bhimtal, Uttarakhand Oct 2021 — Jun 2025
B.Tech, Computer Science & Engineering

Certifications

AWS Certified Cloud Practitioner (2025) | Microsoft Azure Fundamentals (2025) | Postman API Fundamentals
Databricks Academy Accreditation - Generative AI Fundamentals | Oracle Agentic AI Foundations Associate (2026)
